Services

Utilising Latest PAT Technology
3 Phase – 32 Amps

Boylo's Test & Tag is in the business of electrical testing & tagging. That is, I test for *electrical safety* & tag, as *electrically safe*, any plug-in electrical appliance. There is always a safety concern when in contact with electrical equipment. Our testing ensures that your appliances:

- **Have No Electrical Leakage**
- **Correctly Directs the Electricity**
- **Are Well Insulated**

Boylo's Test & Tag is guaranteed & a report of the results is included with our service that ensures your appliance is AS/NZS 3760 & Occupational Health & Safety Compliant.

Fees & Charges

All of my services include a professional report of results & recommendations in an easy-to-read format as part of our fees & charges structure.

An indication of my fee structure is listed as below:

- \$5** Standard Electrical Appliance
- \$6** RCD (Residual Current Device) ie; Safety Switch
- \$6** Power Board with 6 or Less Outlets
- \$8** Power Board with more than 6 Outlets
- \$18** 3 Phase Appliance to 32A

Fees are subject to change.

Boylo's Test & Tag is happy to discuss your work place requirements & able to work around your schedule.

Boylo's Test & Tag
OH&S Compliant

ELECTRICAL SAFETY

Whether you own or run a business, or just safety conscious, ***you are responsible*** for the electrical safety of your self, your employees & everyone else on your premises.

It's not the amount of volts that is of concern but the amount of current (Amps) running through the appliance.

Here is a basic breakdown of what you can expect when you experience an electric shock from a 240V power supply:

Amps Vs Common Appliance

0.008	Mild Sensation
0.02	Painful
0.05	Severe Shock
0.09	Extreme Breathing Difficulties
0.1	Severe Burns, Breathing Stops, Death
<hr/>	
0.02	Phone Charger
0.4	Printer
1.6	Computer
2.3	Angle Grinder
10.0	Extension Lead

* For illustrative purposes only. Amps vary depending on make & model.

Make no mistake, electrical safety is serious & needs to be dealt with in a serious & safe manner. Contact **Boylo's Test & Tag** to make your workplace appliances electrically safe as well.

PAT TECHNOLOGY

PAT Stands for Portable Appliance Tester.

It is a highly sensitive precision instrument & the most effective way to determine the safety of any portable electrical appliance.

Boylo's Test & Tag uses the **SAFE CHECK Pro Logger II** incorporating RCD testing, 10A & 25A high current earth testing, all with a Check/Connect feature. It will only initiate a test sequence if it is correctly connected. It will not damage the appliance under test. There is no ambiguity with results, just a straight PASS or FAIL with measured values recorded.

Coupled with the PAT is the TPL-2032. It allows for the testing of 3 Phase appliances up to 32Amps, both 4 & 5 pin. As with the PAT, the TPL-2032 is a precision instrument engineered to test your appliances in accordance to the AS/NZS 3760 requirements. Both instruments are serviced & calibrated on a regular basis to ensure their accuracy.

Compliance Without Compromise

Continued robust testing & tagging of electrical equipment is recommended to maintain maximum safety.

ELECTRICITY IS DANGEROUS BECAUSE YOU CANNOT SEE, HEAR OR SMELL IT.

FREQUENCY OF TESTING

Frequency of testing is determined by a number of factors. Electrical appliances ***mainly*** tested & tagged dependent upon the environment in which they operate.

A basic guide is as follows:

3 Months → Construction Sites

6 Months → Factories, Workshops, Manufacturing Facilities

12 Months → Businesses, Offices, & Commercial Practices

24 Months → Hotels, Motels & Hostels

60 Months → Domestic

* Second-hand & Repaired Equipment on Reintroduction to Service.

I Welcome All Enquiries Relating to Your Needs & Circumstances.
